## Hortonworks Data Platform: Apache Ambari Release Notes

Copyright © 2012-2017 Hortonworks, Inc. All rights reserved.

The Hortonworks Data Platform, powered by Apache Hadoop, is a massively scalable and 100% open source platform for storing, processing and analyzing large volumes of data. It is designed to deal with data from many sources and formats in a very quick, easy and cost-effective manner. The Hortonworks Data Platform consists of the essential set of Apache Hadoop projects including MapReduce, Hadoop Distributed File System (HDFS), HCatalog, Pig, Hive, HBase, ZooKeeper and Ambari. Hortonworks is the major contributor of code and patches to many of these projects. These projects have been integrated and tested as part of the Hortonworks Data Platform release process and installation and configuration tools have also been included.

Unlike other providers of platforms built using Apache Hadoop, Hortonworks contributes 100% of our code back to the Apache Software Foundation. The Hortonworks Data Platform is Apache-licensed and completely open source. We sell only expert technical support, [training](#) and partner-enablement services. All of our technology is, and will remain free and open source. Please visit the [Hortonworks Data Platform](#) page for more information on Hortonworks technology. For more information on Hortonworks services, please visit either the [Support](#) or [Training](#) page. Feel free to [Contact Us](#) directly to discuss your specific needs.

# 1. Release Notes Ambari - 2.6.1

## RELEASE NOTES: Apache Ambari 2.6.1

The Ambari 2.6.1 Release Notes summarize and describe the following information released in Ambari 2.6.1:

- [New Features \[1\]](#)
- [Behavioral Changes \[1\]](#)
- [Patch Information \[2\]](#)
- [Common Vulnerabilities and Exposures \[2\]](#)
- [Known Issues \[3\]](#)
- [Fixed Issues \[5\]](#)

## 1.1. New Features

The Ambari 2.6.1 release includes the following new feature:

**Table 1.1. Core Ambari**

Feature	Description	Reference
<a href="#">AMBARI-12556</a>	Ambari now allows you to apply patches to specific services within a stack. For example, if only YARN needs to be upgraded, a patch VDF can be used to tell Ambari to orchestrate an upgrade of just the YARN service.	<a href="#">Performing a Patch Upgrade</a>

## 1.2. Behavioral Changes

Ambari 2.6.1 introduces the following change in behavior as compared to previous Ambari versions:

**Table 1.2. Core Ambari**

Description	Reference
Ambari will no longer automatically install GPL licensed LZO compression libraries without being configured to do so.	<a href="#">Enabling LZO</a>
Ambari will no longer automatically install GPL licensed MySQL Connector/J. If using Ambari with MySQL, you must first download JDBC drivers and configure Ambari to use them.	<a href="#">Using New and Existing Databases - Hive</a>
Ambari will no longer automatically install the GPL licensed Ext JS libraries. In order to enable the Oozie Server Web UI, you must first download and install Ext JS manually.	<a href="#">Enabling the Oozie UI</a>

<a href="#">AMBARI-22679</a>	RU: Service action failed with NullPointerException on Downgrade after RU
<a href="#">AMBARI-22686</a>	Disabled stack still appears in the UI if VDF is available
<a href="#">AMBARI-226946</a>	For mixed OS deploy, some pig tests failed with MR job failing with 'IOException: Unable to get CompressorType for codec (org.apache.hadoop.io.compress.SnappyCodec)'
<a href="#">AMBARI-22698</a>	Custom zeppelin interpreter properties are getting removed after moving zeppelin to a different host
<a href="#">AMBARI-22716</a>	zeppelin.livy.url is not getting updated after moving livy to a new host

### 1.4. Common Vulnerabilities and Exposures

Ambari 2.6.1.0 includes fixes for the following information-security **Common Vulnerabilities and Exposures (CVEs)**

**Table 1.4. Ambari 2.6.1.0 CVEs**

CVE #	Description
CVE-2017-12629	RunExecutableListener has been disabled by default (can be enabled by -Dsolr.enableRunExecutableListener=true) and resolving external entities in the XML query parser (defType=xmllparser or {!xmllparser ... }) is now disabled by default.
CVE-2017-7660	Fixed Security Vulnerability in secure inter-node communication in Apache Solr
CVE-2017-3163	Fixed ReplicationHandler path traversal vulnerability
CVE-2016-6809	Upgraded TIKA fixing a potential vulnerability
CVE-2016-3092	Upgraded commons-fileupload to 1.3.2, fixing a potential vulnerability

## 1.5. Known Issues

Ambari 2.6.1 has the following known issues, scheduled for resolution in a future release. Also, refer to the [Ambari Troubleshooting Guide](#) for additional information.

**Table 1.5. Ambari 2.6.1 Known Issues**

Apache Jira	HWX Jira	Problem	Solution
<a href="#">AMBARI-24536</a>	BUG-109839	When SPNEGO is enabled ( <code>`ambari-server setup-kerberos`</code> ), the SSO ( <code>`ambari-server setup-ss0`</code> ) redirect no longer works.	No known workaround. Do not enable both kerberos and SSO using ambari-server setup.
<a href="#">AMBARI-22906</a>	BUG-95744	After upgrading Ambari to 2.6.1.0, registering a new HDP version fails with the following error message:  Cannot read property 'gpl.license. accepted' of undefined	Upgrade Ambari to version 2.6.1.5 before upgrading HDP to version 2.6.4.  See steps below:
