Developer documentation links

The following table includes links to Cloudbreak developer documentation:

Documentation link	Description
Set up local development	This documentation will help you set up your local development environment.
Retrieve OAuth bearer token via Cloudbreak REST API	Describes how to retrieve OAuth bearer token via Cloudbreak REST API.
SPI reference	This is Cloudbreak SPI reference documentation.
Cloudbreak and Autoscale API reference	This is Cloudbreak API reference documentation. Cloudbreak is a RESTful application development platform whose goal is to help developers deploy HDP clusters in various cloud environments. Once Cloudbreak is deployed in your favorite servlet container, it exposes REST APIs, allowing you to spin up Hadoop clusters of any size with your chosen cloud provider.
